

AVOCET® TANK MIX COMPATIBILITY in WINTER WHEAT, RYE & TRITICALE

PLEASE ENSURE YOU READ THE NOTES SECTION

This version supersedes all previous editions

Normal = Physically Compatible

Italics = Physically Compatible with Continuous Agitation

Red on Blue = Physically Incompatible

BOLD CAPITALS = Physically & Biologically Compatible

Bold Italics = Biologically Compatible with Continuous Agitation

RED CAPITAL ON BLUE = CROP INJURY - INCOMPATIBLE

HERBICIDES

FOR DEFY READ ACROSS TO CLEANCROP OBEY, SPINNAKER, TOPSAIL AND WICKET

FOR STOMP 400 EC READ ACROSS TO ANTHEM, CLAYMORE, EXIMUS II AND MOST MICRO

This summary sheet provides information on tank mixes conducted with this product. Corteva Agriscience™ gives no warranty or accepts no liability in respect to compatibilities that are beyond the label. This additional information is for guidance purposes only and use is at grower's risk.

Important Note: Do not use any tank mix if the mixture cannot be applied within the label recommendations for individual products or if specific tank mix restrictions apply. Larger, more complicated mixes; unlisted mixes or replacing alternative products to those listed in this table are not endorsed. However, for further information or to register a tank mix request please contact your local Corteva representative or call the Hotline on 0800 689 8899.

Physical compatibility data is based on the results of an industry recognised standard test. Be aware that in the field, water hardness, pH, temperature etc. can vary. Biological compatibility data are based on a small number of field trials, Corteva Agriscience™ cannot warrant the efficacy of other tank mix partners. Where only Physical Compatibility or Sprayable with Continuous Agitation is shown, Corteva Agriscience™ has no biological data regarding efficacy or crop safety and only has data on physical compatibility, so growers use these mixes at their own risk.

NOTES:
Avocet should always be used with an approved adjuvant.

* Topik is supported in mix with Avocet up to the end of February.
† Residual herbicides can be used in mixture or short sequence with Avocet, while conditions are favourable for both products to work and weeds are small and actively growing. However, once soil moisture declines to reduce residual activity then a **4 week** interval between the residual herbicide and an application of Avocet is recommended to maximise grass weed control and the tank mix is no longer supported.
* Do not exceed maximum total dose of florasulam within growing season.
** Do not use this mix if the crop is under stress as there is the increased risk of an additive PGR effect and possible crop damage.
† Corteva Agriscience only support Avocet in a 2-way tank mix with half rate chlormequat due to crop safety issues. An interval of at least **7 days** must be regarded before applying a higher rate of chlormequat or any other PGR.

Do not mix Avocet With OPs, MCPA and Dicamba.
For products containing MCPA or Dicamba respect a 14 day interval between them and Avocet.
Do not harrow or roll within 7 days before or after an application of Avocet.

UPDATES:
September 2025 - Removed Cinder mixes; 19th December 2025 - Changed website address; 5th March 2026 - Adjusted guidance on liquid fertiliser intervals between applications and removed Dithane mixes

USE PLANT PROTECTION PRODUCTS SAFELY. ALWAYS READ THE LABEL AND PRODUCT INFORMATION BEFORE USE.
