PLANT GROWTH REGULATORS		
These products have been tested for physical compatibility only and no guidance is offered regarding crop safety and efficacy. The exception being chlormequat which is biologically compatible to the maximum rate listed. Do not apply rates beyond those tested. The result is based on 1 year data only and is for guidance purposes only. Please leave a 7 day interval between this mix and all other treatments. When tank mixing use Broadway Ultra + adjuvant plus chlormequat (max rate 1.0 l/ha) only.

This summary sheet provides information on tank mixes conducted with this product. Corteva Agriscience™ gives no warranty or accepts no liability in respect to compatibilities that are beyond the label. This additional information is for guidance purposes only and use is at grower’s risk.

Important Note: Do not use any tank mix if the mixture cannot be applied within the recommendations for individual products or if specific tank mix restrictions apply.

Larger, more complicated mixes; unlisted mixes or replacing alternative products to those listed in this table are not endorsed. However, for further information or to register a tank mix request please contact your local Corteva representative or call the Hotline on 0800 689 8899.

Physical compatibility data is based on the results of an industry recognised standard test. Be aware that in the field, water hardness, pH, temperature etc. can vary. Biological compatibility data are based on a small number of field trials, Corteva Agriscience™ cannot warrant the efficacy of other tank-mix partners. Where only Physical Compatibility or Sprayable with Continuous Agitation is shown, Corteva Agriscience™ has no biological data regarding efficacy or crop safety and only has data on physical compatibility, so growers use these mixes at their own risk.

- KEY:**
 Broadway Ultra should always be used with an adjuvant.
[%] Use of an anti-foam agent is recommended.
^{*} Do not use this mix if the crop is under stress as it is unknown if there is an increased risk of an additive PGR effect and possible crop damage.
^{ks} Add BlueN to the spray tank last when the tank is full of water, to allow for maximum dilution.
[#] Please consult the Corteva hotline for further information and advice on this mix. Results are based on one year's data and are for GUIDANCE purposes only. Guidance is only offered based on a mutual understanding between all parties. Corteva recommend that an interval of 7 days is maintained between this mix and all other treatments.
¹ The maximum total dose of florasulam applied to the crop must not exceed 7.5 g. For autumn planted crops a maximum total dose of 3.75 g of florasulam, must be observed for applications made between crop emergence in the year of planting and 15th February in the year of harvest.
